Introduction: Understanding Our Users

This document outlines the core user personas for the **thing.** mobile e-commerce application. As a modern home furniture marketplace, **thing.** aims to provide a seamless, secure, and visually rich shopping experience.

To ensure our UI/UX design and technical architecture (such as Firebase integration and MVVM structure) truly solve user problems, we have identified key target demographics ranging from students and young professionals to homemakers and business owners. The following personas represent our diverse user base, highlighting their specific pain points, primary use cases, and the key benefits they expect from the application.

BERNA YILMAZ

Berna is a 29-year-old architect and a newlywed with a very busy work schedule. She recently moved into a new house and struggles to find the time to visit physical stores to select furniture that matches her modern aesthetic.

Use Case: She uses **thing.** to browse categorized product listings and view high-quality images of cupboards and tables while commuting.

Benefit: The application's clean and user-friendly interface allows her to inspect product details deeply without the hassle of travel. She values the seamless digital shopping experience that fits into her limited free time.

ELİF ALTAN

Use Case: She uses thing. to find modern furniture , specifically focusing on chairs and tables. She heavily relies on the search functionality to find pieces that fit her small room and student budget.

Benefit: The app's profile management feature allows her to keep an eye on her order history tracking. The straightforward design gives her confidence as a first-time buyer making a secure order placement.

SELİN GÜZEL

Use Case: She uses thing. to safely manage her shopping cart and place orders through a secure system.

Benefit: She enjoys using the Profile Management feature to track her order history. The secure environment provided by the backend architecture gives her the confidence to buy home accessories regularly.

Elif is a 21-year-old university student moving into her first unfurnished apartment.

She loves modern aesthetics but gets overwhelmed by complicated, cluttered websites when trying to buy her first big pieces of furniture.

Selin is a 45-year-old homemaker who loves redecorating her home with new accessories.

She is often skeptical about online payments and finds complex checkout flows overwhelming and insecure.

NILHAN ÖZDEMİR

Use Case: She uses thing. to easily browse through the "Home Accessories" and "Furniture" categories on her tablet in the evenings. She relies on the detailed product descriptions and high-quality images to judge if a large cupboard or table will fit her space.

Benefit: The application's user-friendly interface allows her to manage large orders for different rooms without confusion. She values the secure order placement system, which gives her peace of mind when making significant purchases for her large home.

MERT KAYA

Use Case: He uses thing. because he can log in instantly using his Google account via Firebase Authentication.

Benefit: The app's use of the Navigation Component ensures smooth transitions between screens, allowing him to find his ergonomic chair and place an order without any UI freezing or lag

Mert is a 22-year-old Software Engineering student and freelancer who values efficiency. He needs to set up a workspace at home but gets frustrated by slow, buggy mobile websites that require long registration processes.

AHMET ŞEKERCI

Use Case: He browses the app during his commute to view detailed product information and look at high-quality images of cupboards.

Benefit: He values that the application connects users with a seamless digital shopping experience. The secure authentication and reliable order placement system allow him to solve household problems quickly and safely from his phone.

MURAT BAYINDIR

Use Case: He uses thing. to quickly register, create a profile, and manage large orders for his business.

Benefit: The Order History tracking in the profile section helps him keep his business expenditures organized. The cloud-based infrastructure ensures his data and order information are always accessible and up to date.

Conclusion: Core User Needs & Technical Alignment

Based on the diverse needs of our user personas, several common requirements emerge that will directly guide the development of the **thing.** application:

- **Time Efficiency & Ease of Use:** Users across all demographics (like Berna and Ahmet) require a streamlined, intuitive interface that allows for quick browsing and fast checkout without complicated registration flows.
- **Visual Clarity:** Decision-making for furniture relies heavily on aesthetics. High-quality product images and detailed specifications are essential for users like Canan and Zeynep to make confident purchases.
- **Trust & Security:** Homemakers (Selin) and business owners (Murat) prioritize secure payment gateways and reliable order tracking, making robust backend security (via Firebase) a top priority.
- **Performance:** A lag-free experience with smooth transitions is critical for users who browse dynamically or present to clients, validating our choice of a single-activity Navigation Component architecture.

By keeping these personas at the center of our development lifecycle, **thing.** will effectively bridge the gap between user expectations and digital execution.
